

STRUCTURED HIRING & ATS ARCHITECTURE LAB

Evidence over instinct.

A reviewable hiring architecture modeled across 4,000 fictional applications, from requisition controls to structured selection evidence.

4,000 100% synthetic applications	5 requisition families	120 modeled hires	14 documented UAT scenarios
---	--	---	---

Reference implementation under development. Demonstration only. Not for real applicant data.

ARCHITECTURE

Six design stages. One traceable evidence model.

SELECTION MODEL

A stronger story cannot outrank stronger evidence.

GOVERNED COMPOSITE

Composite =
 $0.40 \times \text{Work Sample}$
 $+ 0.40 \times \text{Structured BARS}$
 $+ 0.20 \times \text{Job Knowledge}$

Weights are fixed before subjective comparison.

CAND-2026-0013

Halo-effect control case

Subjective impression	4.60
Governed composite	3.92
Reviewable gap	+0.68

The higher impression does not replace the governed score.

FAIRNESS + PRIVACY

Modeled outcomes. Separated synthetic fields.

Reference progression
26.0% modeled rate

624 / 2,400

Focal progression
22.6% modeled rate

362 / 1,600

KNOCKOUT-PROGRESSION IMPACT RATIO

22.6% ÷ 26.0% = 0.87

- 01 Separation by design.** Cohort fields are isolated from operational selection roles as a documented requirement.
- 02 Counts remain visible** beside modeled rates.
- 03 Four-fifths is an indicator, not proof** of compliance or absence of bias.
- 04 Proposed production requirements** include later-stage monitoring plus reviewed retention and erasure controls.

RECONCILED MODELED VIEW

The model is inspectable by design.

4,000 Synthetic applicants	3.0% 120 modeled hires	28.5d Modeled time to fill	91.8% Modeled SLA adherence	0.87 Modeled impact ratio
--	--	--	---	---

01

Explore

Open the demonstration-only candidate evidence dashboard.

02

Inspect

Trace every KPI to three source CSVs and deterministic tests.

03

Challenge

Review assumptions before any operational use.

Not suitable for real applicant data. Operational use requires independent legal, security, accessibility and validation review.
