

OPEN-SOURCE HR TECHNOLOGY PORTFOLIO

Can 4,000 applications stay auditable?

Yes - when evidence is designed into the operating model before decisions begin.

4,000

synthetic applications

5

requisition families

120

modeled hires

100% SYNTHETIC

OPEN-SOURCE

NO LIVE ATS

FROM REQUISITION TO REVIEW

Six stages. One evidence chain.

The model connects decision rights, job-related evidence, service levels, and audit signals without presenting automation as authority.

01	Authorize Headcount, grade, owner, dates	PROPOSED
02	Knockout Versioned job-related rules	PROPOSED
03	Phone screen Standard evidence capture	MODELED
04	Assess Work sample + BARS + knowledge	MODELED
05	Calibrate Locked scores before discussion	TESTED
06	Decide + retain Reason code, offer, erasure path	PROPOSED

DESIGN PRINCIPLE

A decision should be explainable from requisition approval to final disposition.

OpenCATS-inspired model - no live integration

Architecture before automation

GOVERNED EVIDENCE

A stronger story cannot outrank stronger evidence.

GOVERNED COMPOSITE

0.40

Work sample

0.40

Structured BARS interview

0.20

Job knowledge

Weights are fixed before subjective comparison.

CAND-2026-0013

Halo-effect control

Subjective impression

4.60

Governed composite

3.92

Reviewable gap

+0.68

The impression triggers review. It does not replace the governed score, and the candidate is not hired.

INTERPRETABLE MEASURES

Fairness needs counts, not comfort.

A ratio is a monitoring signal. The underlying cohort counts remain visible so reviewers can challenge what the headline hides.

REFERENCE PROGRESSION

624 / 2,400

26.0%

FOCAL PROGRESSION

362 / 1,600

22.6%

KNOCKOUT-PROGRESSION IMPACT RATIO

$$22.6\% \div 26.0\% = 0.87$$

Above the 0.80 rule-of-thumb threshold. This is not proof of fairness, legal compliance, or absence of bias.

91.8%

feedback SLA
adherence

1,836 / 2,000

evaluations at or below 48
hours

28.5d

FOR HR, TA, AND HRIS REVIEWERS

Built to be inspected.

This is not a polished claim in search of evidence. The data, formulas, controls, limitations, and source are public so an expert can test the reasoning.

01 Explore the live model

Filter the synthetic funnel, inspect score evidence, and review the governed KPIs.

02 Audit the source

Read the data contracts, methodology, tests, privacy controls, and limitations on GitHub.

03 Challenge the assumptions

Ask what would be required before operational use: validation, RBAC, accessibility, security, and legal review.

Explore the live model ↗

Audit the source ↗

Not suitable for real applicant data. Operational use requires independent legal, security, accessibility, and validation review.
