

STRUCTURED HIRING & ATS ARCHITECTURE LAB

Evidence over instinct.

A synthetic portfolio simulation and enterprise-oriented reference implementation under development. It models reviewable screening and structured evidence across 4,000 fictional applications.

100% synthetic

5 requisitions

4,000 applicants

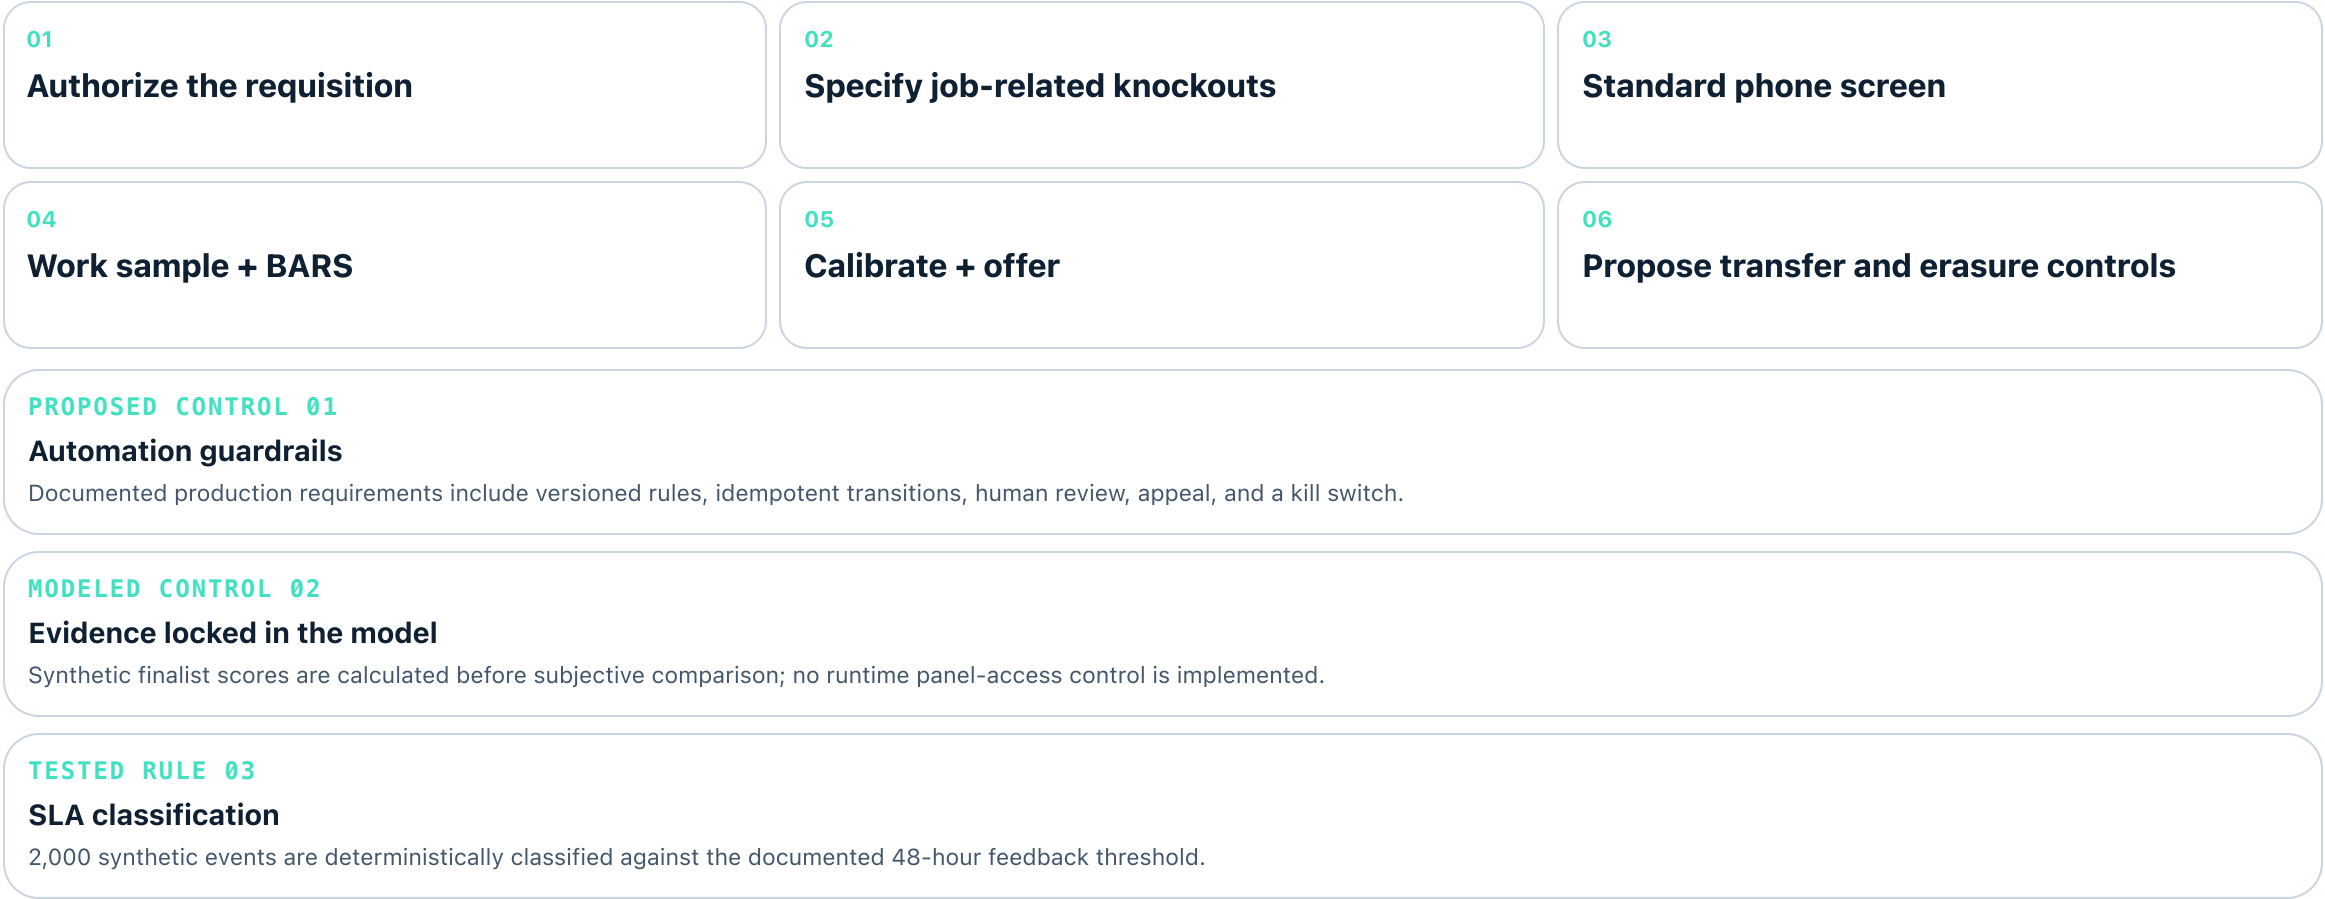

120 modeled hires

14 documented UAT scenarios

Not for real applicant data

ARCHITECTURE

Six design stages. One traceable evidence model.

A stronger story cannot outrank stronger evidence.

Composite =
0.40 × Work Sample
+ 0.40 × Structured BARS
+ 0.20 × Job Knowledge

CAND-2026-0013
Halo-effect control case

Subjective impression	4.60
Governed composite	3.92
Reviewable gap	+0.68

Model outcomes with separated synthetic fields.

Reference progression

624 / 2,400

Focal progression

362 / 1,600

Knockout-progression impact ratio

0.87

- Design requirement: isolate cohort fields from operational selection roles
- Counts remain visible beside modeled rates
- Later-stage monitoring flags are documented
- Four-fifths is an indicator, not proof of compliance or absence of bias
- Production requires reviewed retention and erasure controls

RECONCILED MODELED VIEW

A portfolio artifact with executable data checks.

4,000

Synthetic applicants

3.0%

120 modeled hires

28.5d

Modeled time to fill

91.8%

Modeled SLA adherence

0.87

Modeled impact ratio

Explore

Open the demonstration-only candidate evidence dashboard.

Inspect

Trace every KPI to the three source CSVs and deterministic tests.

Challenge

Not suitable for real applicant data; operational use requires independent review.
